

PLATO'S PARMENIDES:
THE TEXT OF PARIS B, VIENNA W, AND PRAGUE

Robert S. Brumbaugh

November, 1987

Plato's Parmenides: The Text of Paris B, Vienna W, and Prague

In 1983, Robert Brumbaugh published a study of Plato's Parmenides in this Archive. His crucial concern was to establish the dialogue's serious intention and rigorous deductive logic. But there are enough gaps, anomalies, and apparent fallacies in our current texts to cast some doubt on such a claim. In addition, the reported variant readings of Bekker and Stallbaum are a complex maze that defies simple reorganization into an intelligible stemma, as though some unique complications attended the transmission and correction of the second family manuscripts. However, the author claims that a closer second look at the manuscripts in question supports his interpretation.

The apparent complexity of cross family variants and hypothetical lost sources of corrections is largely explained by a correction of Bekker's reporting of Paris B, a correction which leads to a simple stemma and largely resolves the maze of post-13th century manuscripts. Among the older manuscripts, detailed collation of Vienna W shows a number of cases where W in fact has what is the "serious and correct" text against deviations in B and T. (And the Prague Plato, a 14th century copy of W, contains as corrections some further "good" readings against B, T, and W.)

This is very well, but the supporting evidence is not given in the 1983 article. An intention is expressed to put this material somewhere in the Beinecke Library, but that is all. It would seem a useful service to anyone interested in this particular argument to have the data on which it rests--the actual and reported readings of the relevant manuscripts--somewhat more ready to hand.

The reason for presenting this material in a philosophy archive is that its interest is in fact philosophical more than philological. If it supports the argument as it is said to, the result is important for the interpretation of one of Plato's most controversial dialogues. Philologically, however, the simplified stemma is a relief, but not one of much editorial importance; and the W and Prague material are a very modest set of changes.

The Greek text is given in transliteration, which can be more easily handled by word processor and computer. Accents and long vowels are indicated only for the variant texts. Because of its technicality it has been submitted to the microfiche supplement rather than the main printed text of the Philosophy Research Archives.

Paris B Detailed Report

- 1.18* (137D5). P1 omits ēde, P2 adds it i.m. Bekker does not note the P2 correction, which explains why the word is omitted entirely in one sub-family (Paris EF) and inserted in the wrong place in another (Venice Larbda-Paris C).
- 1.18 (138E2). P2 corrects to kuklou against the kuklōi of P1 and mss.
- 1.20 (138E2). P1 mistakenly inserts a to near the end of the proposition: eti to hen alla juo. P2 deletes it.
- 1.24 (128C1). P1 apparently follows T but transposes two words: eti pou einai, T; pou eti einai, P. BW read pou hen eti einai; P2 combines the two texts, getting pou hen eti pou einai. (Y=P)
- 1.32 (138D6). P1 omits eiper, P2 adds it i.m. (the reason is probably Tub.'s eiperge run. together).
- 1.34 (138E5). Here P reads kata mere mētē holon, thus disagreeing with the reported mētē kata holon of T. But T has been misreported here, and actually P=T.
- 1.46 (139B8). P omits an auto near the end of the first phrase, auto d' ouk an eie; and in the response, omits the final oun: ou gar for ou gar oun.
- 1.48 (139C3). P reads allo against mss allōi (this, according to Waddell's report, = B2); it is followed by Par. I and Par. C1. (This particular confusion may prove important in connection with the text of Parmenides 140C2.)
- 1.50 (139C7). Another omicron-omega confusion: P1 reads auto with T, mss, but P2 corrects a.1. to autōi with Tub. C has omicron corrected to omega a.1.; I has omicron.
- 1.52 (139N3). P has dēper against the dēpou of BTW.
- 1.57 (139E4). P reads autōi with B Tub. against the hautōi of the other mss.
- 1.58 (139E7). P2 corrects out' heautōi, T, to outh' heautōi; Y=P.
- 1.68 (140B5). In the response, Tub., T1, and P1 all have omitted a dē; added by T2 and P2 i.m.

* These numbers refer to R. S. Brumbaugh's text in Plato on the One. New Haven, 1961.

- 1.76 (14GD4). P reads oude a^u with WVY against the oute a^u of BT. (W actually reads oude a^u here, not oud'a^u as Diès, POTO report. Waddell notes that oute is written with a comendium in T.)
- 1.80 (141A4). P reads to, with omicron, agreeing with Tub. and L against the t_oi (omega, no accent, iota subscript) of WD, and the t_oi of BTV (CHI Lambda=P).
- 1.85 (141B3). P is alone in agreeing with the editors' preferred text, diaphorou, against the diaphoron of BD and the to diapharon of TWAnon.
- 1.86 (141B8). P1 agrees with mss in diaphorotes but P2 corrects to diaphoron te.
- 1.94 (141E2). P reads esti with WD, but apparently this is a correction in an erasure; BT Tub. read estai; since this is also the text of Cabci, it seems that P1 read estai.
- 1.97 (141E9). A skip in P, homoioteleuton.
- 1.103 (142A7). P agrees with Tub. 1 and L in the accent of oukoun, against the other mss.
- 2.002 (132B3). P agrees with Tub. in reading te instead of the pote of BTW; it is followed by CEFHIYXilabciz.
- 2.006 (142C5). P reads epei d' an against mss epeidan; B and Tub. are ambiguous here.
- 2.018 (143E1). ousian auto^u einai, mss; P1 omits auto^u; added i.m. P2.
- 2.028 (.43D3). For h^o, P Tub. B read h_oi, iota subscript. W here in fact agrees with T in h_o, rather than Y (h_o).
- 2.029 (143D5). ara, omitted P1, is added as a comendium by P2 at end of a line; misread by Par. C1 as cp. for estin.
- 2.032 (143D9). For trion P reads tria.
- 2.033 - 2.034 (143E3 - E5). A skip in P (hom.), shared by various P descendants.
- 2.042 (144C1). ara is cp. at end of line in P; omitted EF1IY; misread as eti C.
- 2.049 (144D6). gar to on tou^u henos mss; P1 omits to^u, added a.1. P2; Y and its copies also omit to^u.
- 2.056 (145A5). hotioun auton mss; auton om. P1, added a.1. P2.
- 2.066 (145C8). eti omitted P1 with Tub. BWV; added a.1. P2.

- 2.066 (145C8). enestai mss. P; but in erasure P.
- 2.074 (146A4). P has the correct text, to en, agreeing with Tub., V2B2 and copies of V.
- 2.076 (146A9). P reads peporthen with Tub. V against the other mss.
- 2.089 (146D4). The mss read auto; in P au/to split lines; FRPrague read au to.
- 2.091 (146D7). P reads toi, iota subscript; T has a compendium; W1 actually reads tōi, corrected to tou a.1. W2; VY have tō (no iota subscript); DR have tautoi.
- 2.097 (147A3). hen ēi, mss, is written with a compendium in P; it is copied as hen ē by Lambda EFHI.
- 2.099 (147A7). For toi henos ta mē hen, mss. P reads toi mē henos ta mē hen, and this is copied by CR, etc.
- 2.103 (147B7). to hen ara . . .: ara is a compendium in P, misread as estin EF1.
- 2.106 (147C4). houtōs is omitted P1, add i.m. P2. It is also omitted in L, EF, and Escorial 1.
- 2.108 (147C6). For eien to te, P reads eien kai to te, and is followed by Y et al.
- 2.109 (147D1). tira BT, tini Tub. WV Prague P.
- 2.112 (147D7). The kai which R omits is at the end of a line in P, and not easily legible.
- 2.118 (148A7). (This entry corrects POTO apparatus.) tōi autoi, P1 T1 W; tōi tautoi T2 i.m., P2 i.m. (Also Lambda 2).
- 2.128 (148D1). hezutoi is the text of P2 and of Tub. alone; it is also a correction in Prague. All others: hautōi, except R, a late copy of D, reported as hεautou.
- 2.129 (148D4). ti P BD; to TW.
- 2.133 (148E3). auto P Tub. WV; hautou mss.
- 2.134 (148E4). hēi (aspirate, circumflex, iota subscript, correct) B1; ēi T; ē B2; hē (no accent) Tub. P; hēi (aspirate and iota subscript, no accent) W.
- 2.134 (148E4). P reads haptesthai with Delta; the other mss divide between haptetai (incl. Tub. T) and hapsesthai.

- 2.140 (149A7). P is not clearly legible, explaining C's oligon for the correct oligiston.
- 2.144 (149C4). estin mss; esti P Tub. W Prague.
- 2.161 (150B5). tes smikrotistos mss; P1 tes mikrototos; P2 adds s- a.1.
- 2.162 (150B8). autoi BTW; autoi P (and F1R2).
- 2.164 (150C7). au to hen TY; auto en W1V1P2 (-o in erasure); auta W2 a.1., V2 a.1.
- 2.172 (157A5). to ge TWY, to te B, tote P (and E2 a.1., Lambda).
- 2.175 (151B6). to hen ara ison mss; to hen ara meizon to ison P1; P2 cancels meizon to.
- 2.179 (151C8). hautoi mss; autoi P Tub. b et al.
- 2.181 (151D4). P and W both read anankē pleion einai, which Bekker had proposed as an emendation of the mss anankē kai pleon einai.
- 2.186 (152A3). ara is a compendium at the end of a line in P; this explains its omission in CEF1R.
- 2.194 (152C7). kata toute hei, hei omitted P1, added P2 i.m.
- 2.195 (152D2). epesche P Tub. V; epeschen mss.
- 2.196 (152D5). autoi P (and aiz); hautoi mss.
- 2.198 (152D7). P Tub. read hotan, aspirate and acute over initial o, lenis and grave over a; hotan, mss; hot' an V.
- 2.200 (152E2). For heautoi, heautoi kai ex, or heautoi kai mss, P1 reads heauto kai, corrected to -ou a.1. P2.
- 2.214 (153C3). panton proton mss; proton omitted P1, add i.m. P2.
- 2.223 (154B8). pote omitted P1 (and Gamma); added a.1. P2.
- 2.224 (154C3). pote omitted P1, added i.m. P2.
- 2.227 (154C7). pou chronon mss; pou omitted P.
- 2.229 (154D4). Nai omitted P1, add. -n with -ai a.1. P2.
- 2.233 (155B4). POTC correction: for talla, WPV read ta alla.
- 2.233 (155B4). ton allon mss; ton is a compendium at end of a line of P, omitted Y.
- 2.234 (155C4). hautoi mss; autoi Tub. 1 P Prague (W not noted here).

- 2A.07 (156A7). gignetai te mss; te omitted W P Prague.
- 2A.11 (156B7). hotan is th mss text, incl. Tub.; hot' an P BW.
- 3.05 (157C3). hen, omitted Damascius, is omitted P1, added a.1. P2.
- 3.08 (157C8). an omitted Tub. BW P1; added a.1. P2.
- 3.17 (158B6). dē apeira plēthei TW; dē plēthei P1; ēdē plēthei apeira B; P2 adds apeira i.m. with index after dē; copies of P have the T order.
- 3.28 (158E6). hēi de TW1; de omitted P1, add a.1. P2.
- 4.07 (159C5). chōris ara, ara is cp. at end of line in P; misread as esti, i.
- 4.14 (159E2). enestin (right) P Tub. 1 D V; en estin W; hen estin BT Tub. 2.
- 4.15 (159E6). metechoi, PBW; metechēi, T.
- 4.17 (16CA4). There is an error in the POTO text, which I found in comparing it to the photographs of P: the proposition should end pantēi pantōs steromenois, rather than pantōs steromenois.
- 5.01 (160B5). dē de has some misadventures; thus E corrects to de a.1., Y etc. omit dē, dē was also omitted in Tub., but the cause of later confusion is probably the fact that de is written as a compendium in P.
- 5.30 (161D7). T has alle, with no aspirate indicated; P1 follows this, and the aspirate is added by P2.
- 5.36 (162A2). P and some of its copies have estai mē on instead of the mss estai on.
- 5.37 (162A4). The POTO apparatus needs a correction: mē estai is the text of BW et al.; estai the text of TP.
- 6.04 (163C4). pōs de einai is the mss text; P1 has pōs de ouk einai; ouk is cancelled, P2.
- 6.05 (163C8). einai dunaito an is the TW text; Tub. B P1 omit einai; added i.m. P2, but with index in text after dunaito. This accounts for the confusion in F1Y, etc.
- 6.12 (163E4). aei deī P1 (and Y, etc.); deī aei mss, P2.
- 6.12 (163E4). The response punctuation is a problem. Where POTO prints tōi autōi • pōs gar ou; neither P nor W has the high point after autōi. There is no punctuation there in Tub.; T has i.

- 6.14 (163E7). matechon ontos W Prague V BTPY; zet. tou ontos (correct)

Vienna W and Prague: Passages where W differs from B or T, with Prague given for comparison; passages where Prague differs from W, with BT given for comparison. (V=Vat. gr. 1029).

The corrections of Prague 2 are from a source very close to Paris B. But in some cases, they seem to have the correct text, where neither B nor T nor Tub. does so, and where, of course, W1, which Prague 1 has followed, does not. The correct text is starred in each entry.
